SUMMARY

Product designer who ships the whole thing — research, interface, motion, and the working software itself. 2+ years designing and launching my own consumer and B2B products: a fully-offline iOS app on the App Store and a 0→1 SaaS with a paying customer. Obsessive about the details that make products feel trustworthy — spring-tuned motion, tabular numerals, intent-coded color — and genuinely obsessed with prediction markets: I built a prediction-market interface study before I ever saw this posting. My portfolio for this application is a live, Kalshi-themed site: [kalshi-portfolio.pages.dev](#).

WHAT YOU ASKED FOR → WHAT I BRING

1+ years product design	2+ years designing and shipping my own products end to end — every design decision and every screen was mine.
A compelling portfolio (show us!)	A working site built for this application — live market UI, case studies, and an interaction lab: kalshi-portfolio.pages.dev .
Obsessive over design details	Price motion on tuned springs, numerals that never jitter, color that only ever means direction, reduced-motion support throughout.
Customer intuition & consumer sensibility	Sip was designed for a real consumer moment — loud bar, no Wi-Fi, one hand. FireCode came from six years living inside its industry.
Move fast	Solo-founder speed: this application's five-page site — design system, live components, copy — was designed and shipped in days.
Passion for prediction markets	Market Pulse, a prediction-market UI study built on my own time: polymarket-resume.pages.dev . The obsession predates the application.

EXPERIENCE

FireCode AI — Founder & Product Designer / Engineer <i>0→1 SaaS for the fire-alarm trade · React, Supabase, Cloudflare, Claude</i> - Researched from lived industry experience, designed every surface, built the product, and landed its first paying customer — the full 0→1 loop, solo. - Designed an in-product AI assistant as a colleague rather than a chatbot bolt-on — prompt flow, streaming UX, and the interface around it.	2024 – Present
Sip: Drinks Abroad — Founder & Product Designer / Engineer <i>Consumer iOS app on the U.S. App Store · React + Vite + Capacitor</i> Designed offline-first for the real moment of use; hand-built design system; 15 locales with full RTL — shipped to the App Store solo.	2024 – Present
AVF Systems Inc. — Low-Voltage Systems Technician <i>Security & life-safety systems · Vacaville, CA</i> Six years of reliability-critical work where small mistakes have real consequences — the origin of the detail obsession above.	2019 – 2026
